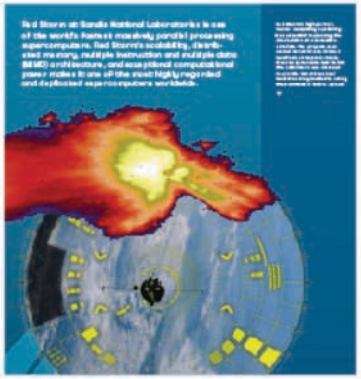
RED STORM

ROADRUNNER

DAWN

40.75"



Red Storm at Sandia National Laboratories is one of the world's fastest massively parallel processing supercomputers. Red Storm's scalability, distributed memory, multiple instruction and multiple data (MIMD) architecture, and exceptional computational power makes it one of the most highly regarded and duplicated supercomputers worldwide.

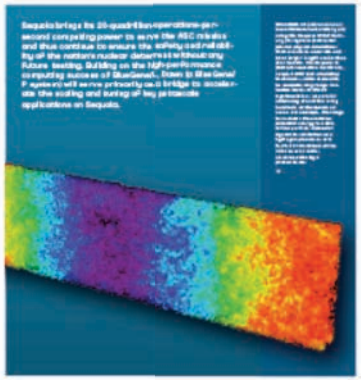
Red Storm at Sandia National Laboratories is one of the world's fastest massively parallel processing supercomputers. Red Storm's scalability, distributed memory, multiple instruction and multiple data (MIMD) architecture, and exceptional computational power makes it one of the most highly regarded and duplicated supercomputers worldwide.



Sequoia brings its 20-quadrillion-operations-per-second computing power to serve the ASC mission and thus continue to ensure the safety and reliability of the nation's nuclear deterrent without any future testing. Building on the high-performance computing success of BlueGene/L, Dawn (a BlueGene/P system) will serve primarily as a bridge to accelerate the scaling and tuning of big petascale applications on Sequoia.
