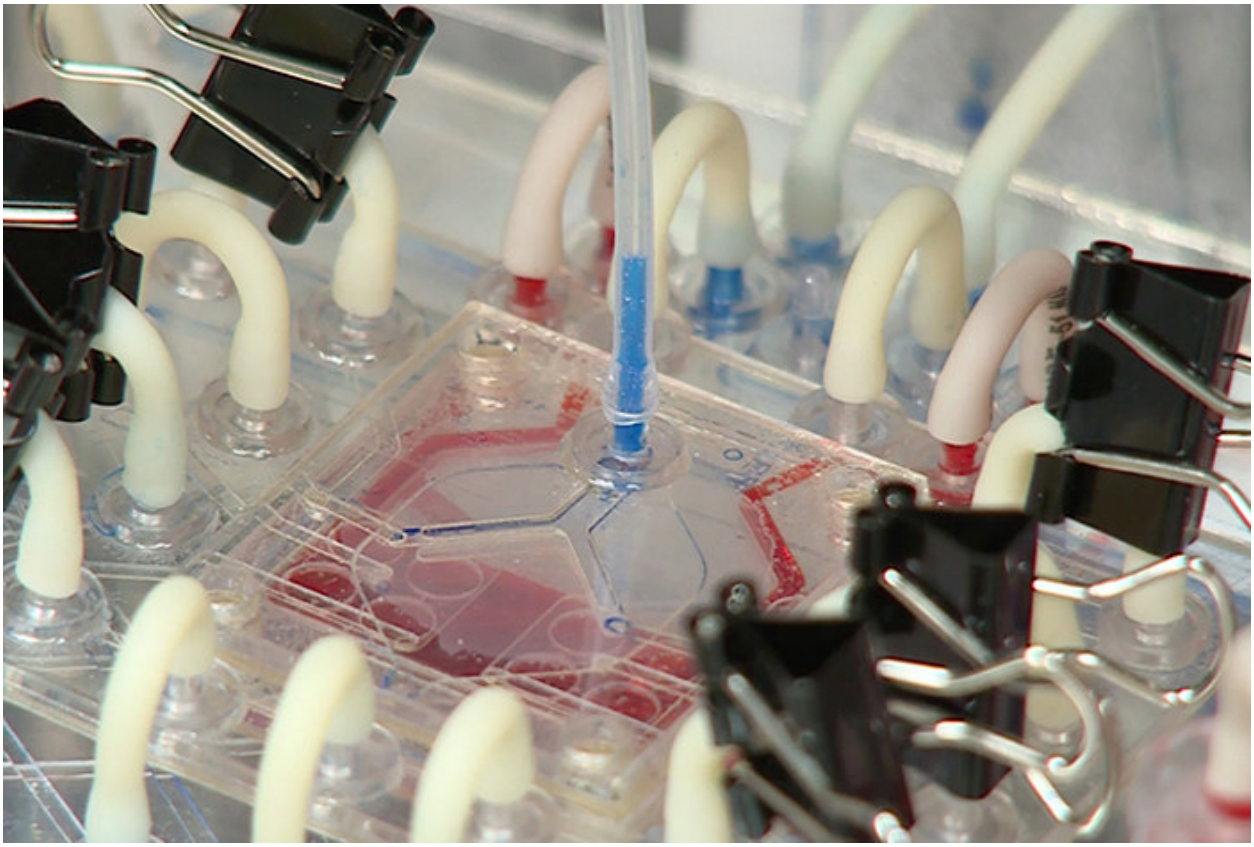
KRQE News: New Mexico scientists develop tiny, artificial lung

May 12, 2016



New Mexico scientists develop tiny, artificial lung

It is miniature in size but not in significance.

New Mexico researchers are creating a new device to test what people are breathing into their bodies and how harmful it could be.

It is an artificial lung, known as PuLMo for Pulmonary Lung Model.

Tiny pieces of plastic are assembled as part of a project at Los Alamos National Laboratory that has been in the works for three years.
