**SUBJECT: AAA MANAGEMENT REORGANIZATION**

As you may know, the Advanced Accelerator Applications (AAA) Program has been undergoing an overall reorganization. As part of that reorganization, Bruce Matthews has been named the new AAA Project Director, effective this week. Bruce takes over from current AAA Project Director Ed Arthur.

Please join me in welcoming Bruce as the new AAA Director.

I would like to thank Ed for all of his hard work over the past several months in getting the AAA Program started. Ed's vision and initiative were major factors in starting AAA, and he will continue to play a vital role in the future progress of the program.

Bruce has been working on aspects of the AAA Program while serving on change-of-station at the University of California, Santa Barbara. Prior to his work at UCSB, Bruce completed a special assignment on safeguards and security for John Browne and served as Division Director of Nuclear Materials Technology (NMT) Division from 1993 to 1999. Bruce first joined the Laboratory in 1980, specializing in nuclear fuels for space and terrestrial reactors.
