The WASTENOT-gram

Save Energy at Work Effortlessly!

It's very easy to save energy at your office with minimal effort. Small sensors can be installed on switches for lights, computer monitors and printers. The sensors detect movement, so the appliance with the sensor will automatically turn on when someone enters the office. If no motion is detected for 15 minutes, then the fixtures with the sensors automatically switch off. Never again will you have to worry about whether or not you left your office light or printer on over the weekend. These sensors are available at no charge. To obtain free sensors for your office, please contact Emilio Racinez. He can be reached via email at eracinez@lanl.gov or by phone at 5-3751.

To schedule an environmental evaluation or presentation for your office, please contact Monica Witt at 7-8626 or mwitt@lanl.gov. These recycling office visits are great for safety meetings, brown bag lunches, group meetings or for any reason at all.

If you have any suggestions or questions, we would love to hear from you.

Please reply to wastenot@lanl.gov
