

Table of Contents

- A) Introduction by David P. Kilcrease
- B) Conference Agenda
- C) Attendee List
- D) Presentations
 - 1) A. Pradhan: Plasma Opacities and High Precision Atomic Physics
 - 2) N. H. Magee: Opacity Calculations at Los Alamos
 - 3) W. F. Huebner: Neglected Opacity Issues
 - 4) A. N. Cox: Opacities in Astrophysics
 - 5) S. Mazevet: QMD Simulations of Dense Plasmas
 - 6) J. Colgan: Improvements to the Finite Temperature Average-Atom Model – The RPA Equations – A Progress Report
 - 7) P. Hakel: ATOMIC Opacity Calculations Using CHEMEOS
 - 8) L. Welser: Visualization Tools for Opacity Analysis
 - 9) D. J. Hoarty: Recent Proposed Opacity Experiments at the AWE HELEN Laser
 - 10) T. Tierny: Possibilities for Opacity Experiments Using TRIDENT Laser Laboratory
 - 11) R. F Heeter: An Overview of LLNL Experiments Relevant to Opacity Code Validation
 - 12) R. C. Mancini: Application of Stark-broadened Line Shapes to the Analysis of Line Absorption Spectra
 - 13) L. Collins: Quantum Molecular Dynamics – Simulating Warm, Dense Matter
 - 14) J. E. Bailey: Opacity Measurements at Z
- E) Appendix: Classified Presentations
(forthcoming)
