

PROJECTS

The students will be placed into 3-person multi-disciplinary teams, assigned a research activity to be completed in an intense 9-week time frame, and partnered with a LANL staff member as a mentor. The projects typically have a modeling, experimental and analysis component. The goal is for the students to produce results and document their activities in a manner suitable for reporting at professional conferences. The 2017 Summer School students will present their research results at an international conference.

TUTORIALS

Students will participate in weekly tutorials on various aspects of dynamic system engineering and cyber-physical systems such as signal processing, modeling dynamic systems, system identification, embedded systems, model validation, nonlinear systems, and machine learning. In most cases the students will apply the material presented in these tutorials to their respective projects.

In addition to the research-focused tutorials, students are presented with professional development lectures that cover applying to graduate school and applying for graduate fellowships. Over the past twelve years, 56 former LADSS students have successfully competed for highly competitive and prestigious National Science Foundation and National Defense graduate fellowships.

STUDENTS

The program is designed for 21 upper division (rising Junior or Senior) undergraduate students or first-year graduate students. We intend to bring in high quality students from diverse academic and cultural backgrounds. Acceptance into the program is based on academic record and letters of recommendation. As a general guideline, students should have sufficient academic achievement that they are, or will be, eligible for graduate school. A variety of academic disciplines are being sought, including computer science, aerospace/mechanical/nuclear/electrical/civil engineering, and mathematics/statistics.

In lieu of salaries, the students will be provided with a fellowship that is intended to also cover relocation and housing expenses. Fellowship amounts range from \$6,500 to \$10,500, depending on academic status and the point of origin for the student's travel to LANL. ***This program is limited to US citizens.***
