

New association amplifies Bradbury's mission

October 3, 2016

If you've ever wondered why the [Bradbury Science Museum](#) doesn't have a gift shop, you're not alone. "There is *huge* demand for a gift shop in the museum," says Ryn Herrmann, vice-president of the [Bradbury Science Museum Association](#) (BSMA). "But because the museum is a Lab facility, managed by the Department of Energy, it's not allowed to offer things you might find at other museums, such as a store."

That's where the newly formed BSMA comes in—to serve as the Bradbury's nonprofit partner and fill the opportunities that the museum cannot legally fill itself. "A nonprofit organization that represents the Los Alamos and BSM mission has been needed for a long time to carry forth the functions and services that are needed and expected," explains BSMA President Andre Trottier, noting that the BSMA operates on an "institutional agreement" with the Laboratory. "In addition to opening a gift shop, the BSMA also plans to provide volunteer opportunities to expand museum outreach and build support for the museum mission through memberships and donations."

The association will also provide science, technology, engineering, and math (STEM) education programs and scientific literacy for people of all ages through workshops, field trips, and special events. "The BSMA is *not* funded by the Lab, so the association must raise funds through memberships, donations, sponsorships, and proceeds from a museum store," says BSMA Secretary KayLinda Crawford.

The store, called Gadgets, will be a moveable kiosk inside the museum and will likely open on Saturday, December 2, during [Winterfest](#). In the meantime, interested parties can visit the BSMA's website for information on how to [become a member](#) or [donate](#).

A visit to the Bradbury Science Museum can inspire students' passions for working in STEM fields and help students gain an appreciation for the tremendous work happening every day at Los Alamos. Photo: Los Alamos County.

Although the BSMA operates separately from the Bradbury Science Museum, the two maintain a close working relationship. In fact, Museum Director Linda Deck sits on the BSMA Board of Directors, along with 12 other volunteer members who are “deeply engaged in the history and scientific innovation of Los Alamos National Laboratory through the museum,” according to Crawford.
