

Sandip Maurya is a staff scientist at the Materials Synthesis and Integrated Devices (MPA-11) group at Los Alamos National Laboratory (LANL). He joined LANL in 2016 as a postdoctoral research associate working with Yu Seung Kim and Rangachary Mukundan on alkaline membrane fuel cells and non-aqueous redox flow batteries. He earned his B.Sc. in Chemistry from South Gujarat University, India in 2007, M.Sc. in Applied Chemistry from Maharaja Sayajirao University, India in 2009, and Ph.D. in Environmental Science and Engineering from Gwangju Institute of Science and Technology, South Korea in 2016. His Ph.D. work was focused on the development of stable anion exchange membranes for vanadium-based energy storage systems. He received the Best Research Award from Korea Research Institute of Chemical Technology for the outstanding performance in research for his Ph.D. dissertation.

His current research interest includes alkaline membrane fuel cells, high-temperature fuel cells, and redox flow batteries. He has published more than 30 research articles in leading peer-reviewed journals with over 800 citations and an h-index of 15. He is also an awardee of LANL's FY19 Distinguished Postdoctoral Performance Award.
