

Dr. Yu Seung Kim is a staff scientist at Materials Synthesis and Integrated Devices (MPA-11), Los Alamos National Laboratory. Dr. Kim presently leads the alkaline membrane fuel cell project funded by US Department of Energy. His research focuses on the fundamental and applied science of fuel cells, including development of ion exchange polymer electrolytes and understanding of catalyst-ionomer interface for polymer electrolyte membrane fuel cells. Dr. Kim received his Ph.D. from Korea Advanced Institute of Science and Technology (1999). After three years of post-doctoral training at Virginia Tech, he joined LANL fuel cell team (2003). He has published ~70 papers with total citations > 11,000 times and an H-factor of 36. He is an author of 7 book chapters on polymer fuel cell technologies. He has credits for 20+ US patents and is the three-time awardee of LANL Outstanding Innovation Technology Transfer Awards (2009, 2012 & 2013). He received special recognition by US DOE Assistant Secretary, David Danielson for his tech to market transfer efforts (2014). He received Outstanding Technical Achievement Award from US DOE Hydrogen and Fuel Cell Program (2016)
